

ASES - Solar 2007 Cleveland Show
Sunday July 8, 2007

Great Lake Solar (GLS) was in attendance at the Cleveland Solar Show and want to comment on how well the City of Cleveland hosted us and the great accommodations at the Convention Center. The weather cooperated, as it was hot and sunny.

We had a chance to speak with many of our manufacture representatives who were on hand to share application knowledge of their products.

Though too many to cover here, GLS would like to mention:

- Fronius- our friends from Brighton, Michigan that are located not to far from the GLS Office were present. They offered an overview of their Grid Tie System Inverters
- Xantrex- reviewed their newest XW Hybrid Series grid tie inverter. A well organized package with all the components on a single mounting plant
- OutBack- Some great Flexware System features displayed. Also thier FX inverter package, M60 controller and best of all the PS1-3000 Grit Tie Package with Battery Backup were on site to see.
- Uni Rac- displayed their line of pole, tilt and roof rail mount systems. They spent time with us covering their Stand Offs with flashing for shingle roof applications
- An IBEW Local 38 Trainer was on hand to show us their PV/Wind off grid system training display. This display is used as part of apprentice training. It was impressive to see that the electrical training has elements of renewable energy hardware and wiring as part of its core program
- Uni-Solar- the Michigan based company reviewed their amorphous silicon Glass Free Module and Metal Roof Laminate PV products
